A Workshop with Valerie Allen

Encaustic Effects Collage and Recycled Collage Workshop

Explore the mixed media process of collage in this three-hour workshop.

Two types of collages will be developed.

The encaustic effect collage includes a packet filled with materials such as sheet music, textiles, foils, decorative papers.

After the collage is arranged and attached, a special recipe of acrylic encaustic effect medium will be applied and leave a feel of beeswax.

The second collage will be constructed of recycled board coated with various pastes, gels and grits.

Working in a jig saw pattern, we will discuss composition before the pieces are attached to the support with soft gel gloss.

All the paints, collage materials, gels, pastes, grits and supports will be provided.

An easy to find supply list of basic tools will be supplied on registration.
